Programmable Temperature Controller (Digital Controller) E5CN-HT (48 x 48 mm)

Programmable Controllers Join the Series! Program up to 256 segments and take advantage of the high cost performance of the new LCD that improves both the field of view and contrast.

- Set up to 8 programmed patterns with up to 32 segments (steps) each.
- High-resolution display with 5 digits/0.01°C display in a compact Controller (48 x 48 mm).
- High-speed sampling cycle of 60 ms.
- High Accuracy Thermocouple/Pt input: ±0.1% of PV Analog input: ±0.1% FS
- Universal inputs on all models (thermocouple, PT, or analog input) to handle various sensors with one Controller.
- A PV/SV-status display function can be set to automatically alternate between displaying the status of the Temperature Controller (auto/ manual, RUN/RESET, and alarms) and the PV or SV.
- Flexible contact outputs with logic operations (AND, OR, and delays) set from the Support Software (CX-Thermo version 4.3). Program settings can be managed.
- Preventive maintenance for relays in the Temperature Controller using a Control Output ON/OFF Counter.

Refer to Safety Precautions for E5_N/E5_N-H/ E5_N-HT.

Refer to *Operation for E5_N/E5_N-H/ E5_N-HT* for operating procedures.

This data sheet is provided as a guideline for selecting products. Be sure to refer to the following user manuals for application precautions and other information required for operation before attempting to use the product.

E5CN-HT/E5AN-HT/E5EN-HT Digital Controllers User's Manual Programmable Type (Cat. No. H169) E5CN-HT/E5AN-HT/E5EN-HT Digital Controllers Communications Manual Programmable Type (Cat. No. H170)

Shaded settings are the default settings.

The applicable standards for the input types are as follows:

K, J, T, E, N, R, S, B: JIS C 1602-1995, IEC 584-1

L: Fe-CuNi, DIN 43710-1985

U: Cu-CuNi, DIN 43710-1985

W: W5Re/W26Re, ASTM E988-1990

JPt100: JIS C 1604-1989, JIS C 1606-1989

Pt100: JIS C 1604-1997, IEC 751

PL II: According to Platinel II electromotive force charts from BASF (previously Engelhard)

Alarm Outputs

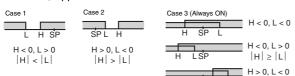

Each alarm can be independently set to one of the following 13 alarm types. The default is 2: Upper limit. Auxiliary outputs are allocated for alarms. ON delays and OFF delays (0 to 999 s) can also be specified.

Note: For models with heater burnout, SSR failure, and heater overcurrent detection, alarm 1 will be an OR output of the alarm selected from the following alarm types and the alarms for heater burnout, SSR failure, and heater overcurrent. To output only a heater burnout alarm, SSR failure alarm, and heater overcurrent alarm for alarm 1, set the alarm type to 0 (i.e., no alarm function).

Set value	Alarm type	Alarm output operation		
		When alarm value X is positive	When alarm value X is negative	Description of function
0	Alarm function OFF	Output OFF		No alarm
1 *1	Upper- and lower-limit		*2	Set the deviation in the set point by setting the alarm upper limit (H) and alarm lower limit (L).
2	Upper-limit	ON X SP	ON X C	Set the upward deviation in the set point by setting the alarm value (X).
3	Lower-limit	ON X SP	ON X SP	Set the downward deviation in the set point by setting the alarm value (X).
4 *1	Upper- and lower-limit range	ON OFF SP	*3	Set the deviation in the set point by setting the alarm upper limit (H) and alarm lower limit (L).
5 *1	Upper- and lower-limit with standby sequence	ON OFF SP	*4	A standby sequence is added to the upper- and lower-limit alarm (1). *6
6	Upper-limit with standby sequence	ON X SP	ON X C	A standby sequence is added to the upper-limit alarm (2). $*6$
7	Lower-limit with standby sequence	ON X SP	ON X SP	A standby sequence is added to the lower-limit alarm (3). $*6$
8	Absolute-value upper-limit		ON OFF 0	The alarm will turn ON if the process value is larger than the alarm value (X) regardless of the set point.
9	Absolute-value lower-limit	ON $\rightarrow X \rightarrow$ OFF 0		The alarm will turn ON if the process value is smaller than the alarm value (X) regardless of the set point.
10	Absolute-value upper-limit with standby sequence	ON OFF 0	ON OFF 0	A standby sequence is added to the absolute-value upper-limit alarm (8). * 6
11	Absolute-value lower-limit with standby sequence	ON OFF 0		A standby sequence is added to the absolute-value lower-limit alarm (9). *6
12	LBA (alarm 1 type only)	-		*7
13	PV change rate alarm	-		*8

*1. With set values 1, 4 and 5, the upper and lower limit values can be set independently for each alarm type, and are expressed as "L" and "H."

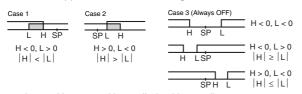

*2. Set value: 1, Upper- and lower-limit alarm

SPH

|H| ≤ |L|

*3. Set value: 4, Upper- and lower-limit range

*4. Set value: 5, Upper- and lower-limit with standby sequence For Upper- and Lower-Limit Alarm Described Above

- Case 1 and 2
- Always OFF when the upper-limit and lower-limit hysteresis overlaps.
- Case 3: <u>Always OFF</u>

*5. Set value: 5, Upper- and lower-limit with standby sequence <u>Always OFF</u> when the upper-limit and lower-limit hysteresis overlaps.

- ***6.** Refer to the *E5CN-HT/E5AN-HT/E5EN-HT Digital Controllers User's Manual* (Cat. No. H169) for information on the operation of the standby sequence.
- *7. Refer to the E5CN-HT/E5AN-HT/E5EN-HT Digital Controllers User's Manual (Cat. No. H169) for information on the loop burnout alarm (LBA).
- *8. Refer to the E5CN-HT/E5AN-HT/E5EN-HT Digital Controllers User's Manual (Cat. No. H169) for information on the PV change rate alarm.

*1. The indication accuracy of K thermocouples in the -200 to 1300°C range, T and N thermocouples at a temperature of -100°C max., and U and L thermocouples at any temperatures is ±2°C ±1 digit max. The indication accuracy of the B thermocouple at a temperature of 400°C max. is not specified. The indication accuracy of B thermocouples in the 400 to 800°C range is ±3°C max. The indication accuracy of the R and S thermocouples at a temperature of 200°C max. is ±3°C ±1 digit max. The indication accuracy of W thermocouples is ±0.3 of PV or ±3°C, *2. Ambient temperature: -10°C to 23°C to 55°C, Voltage range: -15% to 10% of rated voltage
*3. K thermocouple at -100°C max.: ±10°C max.

*4. External communications (RS-232C or RS-485) and cable communications for the Setup Tool can be used at the same time.

Program Control

Number of programs (patterns)	8		
Number of segments (steps)	32		
Comment acting method	Time setting (Segment set with set point and time.)		
Segment setting method	Gradient setting (Segment type with set point, gradient, and time.)		
0	0 h 0 min to 99 h 59 min		
Segment times	0 min 0 s to 99 min 59 s		
Alarm setting	Set separately for each program.		
Reset operation Select either stopping control or fixed SP operation.		ntrol or fixed SP operation.	
Startup operation	Select continuing, resetting, manual operation, or run mode.		
	Number of sets	8	
PID sets	Setting method	Set separately for each program (automatic PID group selection also supported).	
Alarm SP function	Select from ramp SP and target SP.		
Deserve at the second set	Segment operation	Advance, hold	
Program status control	Program operation	Program repetitions and program links	
W	Wait method	Waiting at segment ends	
Wait operation	Wait width setting	Same wait width setting for all programs	
	Number of outputs	2	
Time signals	Number of ON/OFF Operations	1 each per output	
	Setting method	Set separately for each program.	
Program status output	Program end output (pulse width can be set), run output, stage output		
	PV start	Select from segment 1 set point, slope-priority PV start	
Program startup operation	Oten alle	0 h 0 min to 99 h 59 min	
	Standby	0 day 0 h to 99 day 23h	
Operation end operation	Select from resetting, continuing control at final set point, and fixed SP control.		
Program SP shift	it Same program SP shift for all programs		

USB-Serial Conversion Cable

Applicable OS	Windows 2000, XP, Vista, or 7
Applicable software	CX-Thermo version 4 or higher
Applicable models	E5AN/E5EN/E5CN/E5CN-U/ E5AN-H/E5EN-H/E5CN-H/E5AN- HT/E5EN-HT/E5CN-HT/E5GN
USB interface standard	Conforms to USB Specification 1.1.
DTE speed	38400 bps
Connector specifications	Computer: USB (type A plug) Temperature Controller: Setup Tool port (on bottom of Controller)
Power supply	Bus power (Supplied from USB host controller.)
Power supply voltage	5 VDC
Current consumption	70 mA
Ambient operating temperature	0 to 55°C (with no condensation or icing)
Ambient operating humidity	10% to 80%
Storage temperature	-20 to 60°C (with no condensation or icing)
Storage humidity	10% to 80%
Altitude	2,000 m max.
Weight	Approx. 100 g

Note: A driver must be installed in the personal computer. Refer to installation information in the operation manual for the Conversion Cable.

Communications Specifications

Transmission line	RS-485: Multipoint	
connection method	RS-232C: Point-to-point	
Communications	RS-485 (two-wire, half duplex)/RS-232C	
Synchronization method	Start-stop synchronization	
Protocol	CompoWay/F or Modbus	
Baud rate	1200, 2400, 4800, 9600, 19200, 38400, or 57600 bps	
Transmission code	ASCII (CompoWay/F, SYSWAY) RTU (Modbus)	
Data bit length *	7 or 8 bits	
Stop bit length *	1 or 2 bits	
Error detection	Vertical parity (none, even, odd) Block check character (BCC) with CompoWay/F or CRC-16 Modbus	
Flow control	None	
Interface	RS-485, RS-232C	
Retry function	None	
Communications buffer	217 bytes	
Communications	0 to 99 ms	
response wait time	Default: 20 ms	

* The baud rate, data bit length, stop bit length, and vertical parity can be individually set using the Communications Setting Level.

Current Transformer (Order Separately) Ratings

Dielectric strength	1,000 VAC for 1 min
Vibration resistance	50 Hz, 98 m/s ²
Weight	E54-CT1: Approx. 11.5 g, E54-CT3: Approx. 50 g
Accessories (E54-CT3 only)	Armatures (2) Plugs (2)

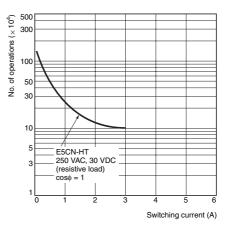

Heater Burnout Alarms, SSR Failure Alarms, and Heater Overcurrent Alarms

CT input (for heater current detection)	Models with detection for single- phase heaters: One input Models with detection for single- phase or three-phase heaters: Two inputs
Maximum heater current	50 A AC
Input current indication accuracy	±5% FS ±1 digit max.
Heater burnout alarm setting range *1	0.1 to 49.9 A (in units of 0.1 A) Minimum detection ON time: 100 ms
SSR failure alarm setting range *2	0.1 to 49.9 A (in units of 0.1 A) Minimum detection OFF time: 100 ms
Heater overcurrent alarm setting range *3	0.1 to 49.9 A (in units of 0.1 A) Minimum detection ON time: 100 ms

*1. For heater burnout alarms, the heater current will be measured when the control output is ON, and the output assigned to the alarm 1 function will turn ON if the heater current is lower than the set value (i.e., heater burnout detection current value).

- ***2.** For SSR failure alarms, the heater current will be measured when the control output is OFF, and the output assigned to the alarm 1 function will turn ON if the heater current is higher than the set value (i.e., SSR failure detection current value).
- ***3.** For heater overcurrent alarms, the heater current will be measured when the control output is ON, and the output assigned to the alarm 1 function will turn ON if the heater current is higher than the set value (i.e., heater overcurrent detection current value).

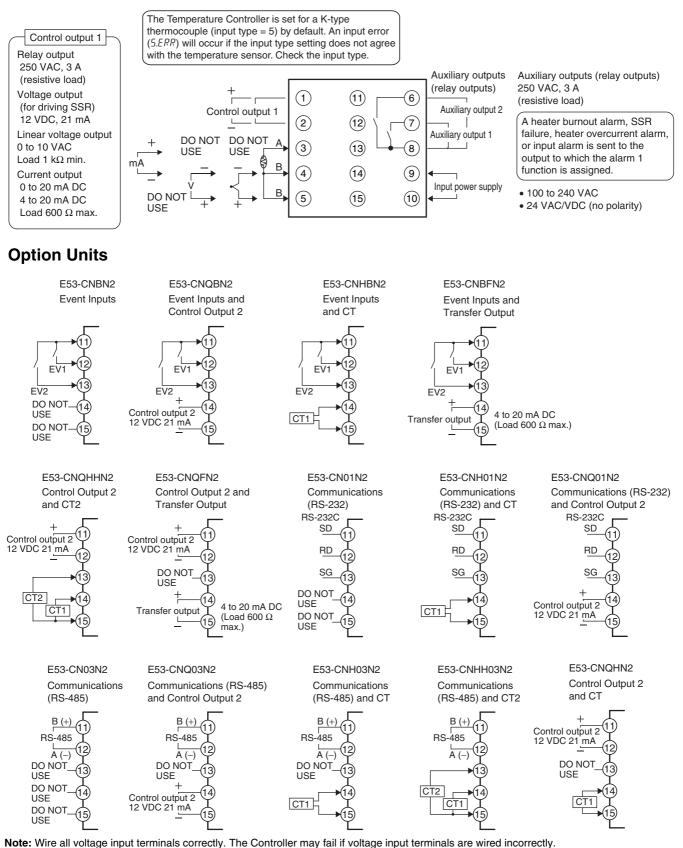

Electrical Life Expectancy Curve for Relays (Reference Values)

External Connections

 A voltage output (control output, for driving SSR) is not electrically insulated from the internal circuits. When using a grounding thermocouple, do not connect any of the control output terminals to ground. If the control output terminals are connected to ground, errors will occur in the measured temperature values as a result of leakage current.
